# MASTER OF SCIENCE IN PUBLIC HEALTH

KPT/JPS(PA 5512)07/22

## PROGRAMME DESCRIPTION

The Master of Public health program under the Faculty of Science is designed to give students academic and technical skills in broad areas. This program prepares professionals to work on a wide range of public health initiatives; policy advocacy, health education, institutional administration, treatment delivery and disease prevention. The program combines the precise training in international relations theory and practice with the analytical and quantitative tools of policy making. The program teaches students a wide range of skills that are valuable for careers in government, business, and international organizations. Global health concerns such as AIDS, avian bird flu, SARS, malnutrition, global warming and the recent Ebola virus have significantly increased awareness and understanding of the critical importance of public health in today's global society. The program would train students in a breadth of research and practice intended to improve population health across the life course. The program is designed as a transformative program, which offers students the education, training, and first-hand experience essential for successful international careers.

## PROGRAMME AIM

The program would aim to progress the health of the entire population and to reduce health inequities among population groups by examining, studying, and acting upon the broad range of factors and conditions that have a strong influence on health. The program of Master in Public health will produce Health Professionals who are:

- Knowledgeable and skillful in the field of Public health, to provide basic idea about the health principles, values and adapt protocols and procedures for progressing theory and practice that improves the efficiency, effectiveness and quality of public health services.
- Able to manage information related to public health with competencies and thus be able to relate to public health sectors that reduces the discrimination in health access and health outcomes.
- Capable of solving problems related to public health in using scientific skills.
- Competent professionals with ethical conducts and perform social responsibilities for facing challenges of the global employment market to work internationally in health departments, with non-government organizations, and with different business cultures.
- Able to develop leadership role with good teamwork, and communication, for the planning and implementing tasks like teaching of public health professionals to understand about the global health care perspectives to enhance their employ ability.
